Claims 14-38 are presented for examination.

The amendments and remarks filed on February 10, 2003 have been received and entered.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 14-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 14-18 are indefinite as to the expression "cataract-like disorders", which fails to set forth the scope of the disorders applicant intends to get protection for.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 14-28 and 34-38 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claims of the instant application are drawn to "the preventing or controlling cataract or cataract-like disorders". The support in the specification shows the treatment or inhibition of cataract induced by the growth factor by the using the claimed compound, a growth factor antagonist. There is no support for the prevention of cataract in general, and there is no support for the

Art Unit: 1614

prevention of "cataract- like disorders" by using the inhibitors of TGFB. In the absence of some understanding of the disease to be treated and which, if any, antagonist could be used to treat said disease, the artisan would not have accepted that the applicant was in possession of the claimed method.

Claims 14-23 and 34-38 are rejected under 35 U.S.C. 102 (b) as being anticipated by WO 92/17206. The WO Patent teaches the use of the claim-designated inhibitors of TGFB, at the claimed concentrations for the treatment of wounds to inhibit scar tissue formation. Such use would inherently prevent cataract formation.
